

TEOYUBE TECHNICAL ARCHITECTURE V1

1. Product Goal

Build Teoyube as a web-first and mobile-ready AI platform that helps Saints discover biblical promises, understand their calling, generate Teoyube prayer words, receive Daily Divine Assignments, and build their Book of the Saint.

2. Recommended Tech Stack

Frontend

- Next.js
- React
- Tailwind CSS
- Progressive Web App first
- Later: React Native / Expo for iOS and Android

Backend

- Supabase
- PostgreSQL database
- Authentication
- Storage
- Row-level security
- Edge functions

AI Layer

- OpenAI API or similar LLM provider
- Embeddings for Bible/promise search
- Structured JSON outputs for reliable AI responses

Hosting

- Vercel for frontend
- Supabase for backend/database
- Cloudflare for DNS and protection

Media

Version 1:

- AI-generated images
- Motion-style storyboard cards
- Narrated scripture slides

Later Versions:

- AI video generation
 - Real-time cinematic animation
 - Voice narration engine
-

3. Core App Modules

Module 1: Authentication

Features:

- Sign up
 - Login
 - Password reset
 - User profile
 - Age, gender, location, language preference
-

Module 2: Purpose Assessment

Collect:

- Spiritual interests
- Gifts
- Talents
- Passions
- Education
- Work experience
- Ministry experience
- Life goals
- Problems user wants to solve
- Prayer needs

Output:

- Initial Calling Profile
-

Module 3: Promise Engine

Functions:

- Search Bible promises
- Match promises to user situation
- Cluster related promises
- Create promise themes

- Assign promise journey status

Output:

- Personalized Promise Cluster
-

Module 4: Teoyube Language Engine

Functions:

- Extract keywords from promises
- Generate Teoyube words
- Create pronunciation
- Explain meaning
- Generate prayer declaration
- Connect word back to Scripture

Output:

- Teoyube Word Card
-

Module 5: Calling Engine

Functions:

- Analyze gifts, talents, passions, life experiences, burdens, and biblical archetypes
- Generate primary, secondary, and emerging calling
- Track confidence level
- Recommend next steps

Output:

- Calling Profile
-

Module 6: Daily Divine Assignment Engine

Generates:

1. Daily Scripture Assignment
 2. Daily Prayer Assignment
 3. Daily Calling Development Assignment
 4. Daily Action Assignment
-

Module 7: Book of the Saint

Automatically records:

- Promise discoveries
 - Teoyube words
 - Prayers
 - Assignments
 - Calling insights
 - Testimonies
 - Purpose milestones
-

Module 8: Promise Table

Version 1 includes:

- Promise Scrolls
 - Calling Compass
 - Book of the Saint
 - Daily Assignment Board
 - Testimony Archive
 - Teoyube Lexicon
-

4. Database Schema

users

- id
- email
- full_name
- age
- gender
- country
- language
- created_at

user_profiles

- id
- user_id
- education
- work_experience
- skills
- talents
- passions
- ministry_experience

- life_goals
- problems_to_solve
- spiritual_interests

assessments

- id
- user_id
- assessment_type
- answers_json
- result_json
- created_at

bible_verses

- id
- book
- chapter
- verse
- translation
- text
- themes
- promise_category
- embedding

promise_clusters

- id
- user_id
- title
- theme
- scripture_references
- summary
- calling_connection
- created_at

user_promises

- id
- user_id
- promise_cluster_id
- status
- notes
- created_at
- updated_at

Status options:

- Discovered
- Studying
- Praying

- Acting
- Witnessing Progress
- Testified
- Remembered

teoyube_words

- id
- user_id
- promise_cluster_id
- word
- pronunciation
- meaning
- source_keywords
- scripture_sources
- prayer
- declaration
- created_at

core_teoyube_vocabulary

- id
- word
- pronunciation
- meaning
- category
- scripture_sources
- prayer_framework
- created_at

calling_profiles

- id
- user_id
- primary_calling
- secondary_calling
- emerging_calling
- confidence_level
- spiritual_gifts
- talents
- passions
- biblical_archetypes
- prophetic_indicators
- growth_areas
- created_at
- updated_at

divine_assignments

- id
- user_id

- assignment_date
- scripture_assignment
- prayer_assignment
- calling_assignment
- action_assignment
- status
- reflection
- created_at

book_of_saint_entries

- id
- user_id
- entry_type
- title
- content
- scripture_references
- related_promise_id
- related_assignment_id
- related_teoyube_word_id
- created_at

testimonies

- id
- user_id
- title
- content
- related_promise_id
- scripture_references
- is_private
- created_at

animation_storyboards

- id
 - user_id
 - promise_cluster_id
 - title
 - scenes_json
 - image_urls
 - narration_script
 - created_at
-

5. AI Architecture

AI Orchestrator

The backend should have one AI orchestration layer that routes requests to specialized agents.

Agents:

1. Promise Agent
 2. Teoyube Word Agent
 3. Calling Agent
 4. Prayer Agent
 5. Assignment Agent
 6. Book of the Saint Agent
 7. Storyboard Animation Agent
 8. Safety/Theology Guardrail Agent
-

AI Flow Example

User submits:

"I feel confused about my purpose."

System flow:

1. Retrieve user profile
 2. Retrieve calling profile
 3. Search Bible promise database
 4. Generate promise cluster
 5. Generate Teoyube word
 6. Generate prayer
 7. Generate divine assignment
 8. Create Book of the Saint entry
 9. Display on Promise Table
-

6. AI Guardrails

Teoyube Guide must:

- Stay grounded in Scripture
- Show scripture references
- Avoid claiming to replace God, Scripture, church, or pastoral counsel
- Use "based on biblical principles and your profile" for guidance
- Avoid unsupported prophetic claims
- Avoid harmful advice
- Connect crisis situations to emergency help

- Never automatically declare a promise fulfilled

For major life decisions, Teoyube Guide should say:

“Based on biblical principles and your profile, this direction appears aligned, but pray, seek wise counsel, examine fruit, and move with wisdom.”

7. API Endpoints

Auth

POST /auth/signup
POST /auth/login
POST /auth/logout

User

GET /user/profile
PATCH /user/profile

Assessment

POST /assessment/purpose
GET /assessment/latest

Promise Engine

POST /promises/discover
GET /promises/user
PATCH /promises/:id/status

Teoyube Words

POST /teoyube-word/generate
GET /teoyube-word/user
GET /teoyube-lexicon/core

Calling Engine

POST /calling/analyze
GET /calling/profile
PATCH /calling/profile

Divine Assignments

POST /assignments/daily
GET /assignments/today
PATCH /assignments/:id/complete

Book of the Saint

GET /book
POST /book/entry
GET /book/timeline

Testimonies

POST /testimonies
GET /testimonies
PATCH /testimonies/:id

Animation Storyboards

POST /animation/storyboard
GET /animation/storyboards

8. Main App Screens

1. Welcome Screen

- TEoyUBE logo
- Tagline: Where God's Promises Meet Your Calling
- Sign up / Login

2. Onboarding

- Basic profile
- Purpose assessment
- Gifts/talents questions
- Prayer needs
- Life goals

3. Today's Promise Animation

First screen after login.

Shows:

- Daily promise

- Scripture reference
- Short animation/storyboard
- Teoyube word
- Prayer button
- Assignment button

4. Promise Table

Central dashboard.

Contains:

- Promise Scrolls
- Calling Compass
- Daily Assignment Board
- Book of the Saint
- Testimony Archive
- Teoyube Lexicon

5. Calling Compass

Shows:

- Primary calling
- Secondary calling
- Emerging calling
- Biblical archetypes
- Growth areas

6. Book of the Saint

Timeline of:

- Promises
- Prayers
- Assignments
- Testimonies
- Calling milestones

7. Teoyube Lexicon

Contains:

- Core words
- User-generated words
- Pronunciation
- Meaning
- Scripture sources
- Prayer framework

8. Daily Divine Assignment

Shows:

- Scripture assignment
- Prayer assignment
- Calling assignment
- Action assignment
- Reflection box

9. Testimony Archive

User records testimonies linked to promises.

10. Settings

- Profile
 - Privacy
 - Language
 - Notifications
 - Subscription
-

9. User Flow

First-Time User Flow

1. User signs up
 2. Completes profile
 3. Completes purpose assessment
 4. Teoyube Guide generates first Calling Profile
 5. Promise Engine generates first Promise Cluster
 6. Language Engine generates first Teoyube Word
 7. Prayer Agent generates first prayer
 8. Assignment Agent creates first Divine Assignment
 9. Book Agent writes first Book of the Saint entry
 10. User lands on Today's Promise Animation
-

Daily User Flow

1. User opens app
2. Sees Today's Promise Animation
3. Reads Scripture assignment
4. Prays generated prayer
5. Completes Divine Assignment
6. Updates reflection
7. Book of the Saint records progress

10. Development Roadmap

Phase 1: Foundation — Month 1

Build:

- Authentication
- User profile
- Supabase database
- Basic UI
- Purpose assessment

Phase 2: Core AI — Month 2

Build:

- Promise Engine
- Calling Engine
- Prayer Generator
- Teoyube Word Generator

Phase 3: Daily Habit Loop — Month 3

Build:

- Daily Divine Assignments
- Book of the Saint
- Today's Promise screen
- Basic Promise Table

Phase 4: Vision Prototype — Months 4-6

Build:

- Calling Compass
- Teoyube Lexicon
- Testimony Archive
- Storyboard animation generator
- Improved UI

Phase 5: Beta — Months 7-9

Build:

- Mobile optimization
- Subscriptions
- Notifications
- Admin dashboard

- Feedback system

Phase 6: Public Launch — Months 10-12

Build:

- App store versions
 - Marketing site
 - Analytics
 - Community waitlist
 - Founder story page
-

11. Budget Estimate

Low-Budget Founder Build

Approximate monthly tools:

- Hosting: \$0-\$25/month
- Database/Auth: \$0-\$25/month starter
- AI API: \$25-\$300/month depending on usage
- Domain: \$15-\$30/year
- Email: \$0-\$20/month
- Design assets: \$0-\$100/month

Estimated first prototype:

\$500-\$5,000 if using no-code/low-code, templates, and one technical builder.

More Realistic Professional Build

Estimated:

\$15,000-\$50,000 for a serious 6-month beta.

Full Vision Build

Estimated:

\$150,000-\$500,000+ for advanced AI video, mobile apps, community, creator economy, and scalable infrastructure.

12. Recommended Version 1 Scope

Build first:

1. Purpose Assessment
2. Personalized Promise Discovery
3. Teoyube Word Generation
4. Prayer Generation
5. Daily Divine Assignments
6. Book of the Saint
7. Basic Promise Table
8. Calling Compass

Do not build first:

- Real-time AI video
 - Creator economy
 - Public social network
 - Church communities
 - Live prayer rooms
-

13. Technical Risk Areas

AI Accuracy

Solution:

- Use structured prompts
- Require Bible references
- Use guardrail agent
- Store approved promise database

Theology Risk

Solution:

- Add review board
- Avoid unsupported doctrine
- Show source scriptures
- Use careful guidance language

Cost Risk

Solution:

- Limit daily AI generations
- Use credits

- Cache outputs
- Pre-generate common promise clusters

User Trust Risk

Solution:

- Transparent sources
- Privacy controls
- Clear disclaimers
- No automatic divine claims

Scope Risk

Solution:

- Build Vision Prototype first
- Delay full video generation
- Focus on daily habit loop

14. Master Developer Prompt

Act as a senior full-stack software architect, AI engineer, product manager, and UX designer.

Design and build Version 1 of TEOYUBE, an AI-powered Biblical Purpose Discovery Ecosystem.

The app must help Saints discover biblical promises, understand their calling, generate Teoyube prayer words, receive Daily Divine Assignments, and maintain their Book of the Saint.

Use:

- Next.js
- React
- Tailwind CSS
- Supabase
- PostgreSQL
- OpenAI-compatible AI APIs
- Structured JSON AI outputs

Build the following modules:

1. Authentication
2. User Profile
3. Purpose Assessment
4. Promise Engine
5. Teoyube Language Engine
6. Calling Engine
7. Daily Divine Assignment Engine

8. Book of the Saint
9. Promise Table
10. Calling Compass
11. Teoyube Lexicon
12. Testimony Archive

The first user experience after login must be Today's Promise Animation.

The app must be Scripture-grounded, privacy-conscious, mobile-responsive, and designed for future expansion into AI video, social features, church communities, and creator tools.

Prioritize:

1. Spiritual clarity
2. Biblical accuracy
3. User transformation
4. Daily engagement
5. Scalable architecture
6. Beautiful sacred design
